

Proposal writing workshop offered

Undergraduate and graduate students and their mentors are invited to attend a proposal writing workshop at the Center for Integrated BioSystems. This will be an opportunity to review the essentials in proposal writing with the desired outcome of making you more successful in the grant-writing process. As this is a workshop (not a lecture) intended to improve your proposal-writing skills, students who have received grant funding will bring examples of their work for faculty and peer review. This workshop has been successful in the past in giving students--and faculty--an edge in writing proposals.

The Center for Integrated BioSystems was established over five years ago to enhance the study of agriculture and life sciences through an integrated and collaborative approach. Collaboration starts at the student level. Students receive funding support for their research. They join other students from all-across campus to network, gain valuable skills, and establish cross-disciplinary collaborations.

CIBR proposal writing workshop will be held:

2:00 – 4:00 p.m.
Friday, February 6, 2009
Biotechnology Building
Room 103
Utah State University
###

Please direct any questions or requests for more information to Dr. Jacob Parnell, CIBR Advisor at 757-5241; jparnell@biology.usu.edu.
